

**Superficial or light peels:** These work on the intra-epidermal level. They clear the skin and exfoliate and work well on acne, enlarged pores or hyper-pigmentation. Most people require three to six peels.

**Medium peels:** These reach deeper, with more dramatic results. Most people need two to three peels. Skin stings slightly during the procedure, feels tight for 24 hours afterwards and may flake or scab

**Deep peels:** This works down to the reticular dermal level, Snow says, and is used on deep wrinkles. There is a risk of hyperpigmentation. "A deep peel requires at least a week off work," Snow says.

## Chemical Peels

*Looking to achieve subtle rejuvenation for your skin?*

A chemical peel provides a superficial to moderate peel which is ideal for pigmentation and subtle rejuvenation of the facial or neck skin.

*Peel away*  
all imperfections.

## Q. What are Chemical Peels?

*Reveal younger, smoother skin!*

Chemical peels refer to a broad range of chemical treatments for the skin. Peels regenerate and resurface the skin at varying depths depending on the agent and concentration used. Superficial peels remove the dead layers of the skin and can help improve uneven pigmentation, whilst medium depth peels target the deeper layers of the epidermis. Deeper peels have the ability to stimulate collagen production, which improves both texture and tone.

## Q. What types of Chemical Peels are there?

There are several types of chemical peels each suited to different skin problems and types. Before commencing a course of Chemical Peel Treatments, it is important to condition the skin by using appropriate skincare for at least two weeks. Conditioned skin responds better to the treatments than unconditioned skin.

At Skinworx we perform a range of peels including:

### Rationale Peels:

Lactic Acid (minimal photo damage)  
Salicylic Acid (acne skin)  
Pyruvic Acid (sensitive skin)

### Dermaquest Peels:

Pumpkin Peel (age management, acne, pigmentation)  
Replenishing Peel (rejuvenation)  
Glycolic Acid (age management)

## Q. What conditions can be treated with Chemical Peels?

Regular peels will:

- Improve the freshness and smoothness of the complexion
- Reduce the appearance of fine lines and wrinkles
- Assist with acne and help reduce congestion and blocked pores
- Promote hydration for firmer, smoother skin
- Help increase cellular turnover
- Improve the texture of the skin and stimulate collagen renewal
- Improve superficial scarring and irregular pigmentation
- Benefit the face, neck, hands and décolletage
