

ASAP MICRODERMABRASION & SONOPHORESIS

Sonophoresis is a safe, non-invasive treatment that uses ultrasonic (soundwave) technology, warmth and motion energy to significantly increase the depth and rate at which treatment products are absorbed into the deeper layers of the skin. It is suitable for all skin types and delivers excellent results when combined with Microdermabrasion.

Microdermabrasion perfectly prepares the skin's surface for the enhanced infusion of treatment products applied during Sonophoresis.

You can have the beautiful skin you've always wanted in minutes with...

MICRODERMABRASION

Your skin is alive.
Exfoliate and Stimulate
your Skin

The outermost layer of human skin is composed of dead skin cells which form a natural barrier hindering active ingredients to penetrate the skin. Microdermabrasion provides a safe and controlled abrasion of these dead skin cells.

The treatment is safe and painless. The skin will look younger and healthier and feel beautifully smooth. A course of treatments are recommended for optimum results and then follow with maintenance treatments.

Microdermabrasion treats all skin types with immediate results. The treatment time is approx. 45 minutes with no post-treatment necessary, except for wearing sunscreen.

At Skinworx we have a variety of microdermabrasion's including hydrating Microdermabrasion which infuses solutions and the ASAP microderm which combines Microdermabrasion with Sonophoresis (non-invasive treatment using soundwave technology).

Treated areas show visible improvements in the tone, texture and colour of skin. Microdermabrasion can also provide excellent results for the following conditions:

- Softens fine lines and wrinkles
- Helps smooth coarsely textured skin
- Decreases the appearance of acne and acne scars
- Blackheads and whiteheads
- Minimize enlarged and open pores
- Dull, stressed or congested skin
- Sun-damaged skin
- Reduces superficial hyper-pigmentation (age spots)
- Skin Pigmentation
- Increased product penetration

SILK PEEL TREATMENT

Similar to microdermabrasion, the Silk Peel Dermal infusion System combines non-invasive exfoliation with deep delivery of patient-specific solutions directly to the skin - without the use of crystal or other chemical exfoliants.

When you get a Silk Peel, you won't have any downtime, and don't have to worry about dealing with irritated or inflamed skin. Within about 30 minutes, Silk Peel's wet exfoliation leaves your skin silky-smooth, hydrated, bright, and full of the youthful, healthy glow that we all desire.

HYDRABRASION TREATMENT

Hydrabrasion is a system that exfoliates the skin with diamonds but simultaneous cleans the skin too. To maximize the most effective treatment, it uses a system of water & aloe vera. We use water to clean and aloe to provide contact cooling and instant soothing. Combined together, they create a truly soothing, refreshing treatment
